SUGNL – June 11, 2024
Sitecore XM Cloud – A Deep Dive on
Bring Your Own Components (BYOC)

#### About me

HAYEE

- ☐ Robbert Hock Kayee
- ☐ The Netherlands
- ☐ 15x Sitecore MVP (2010-2024)
- ☐ Sitecore contractor (Lead Developer, Sitecore Architect)
- ☐ Sitecore experience since 2008
- ☐ Original founder of SUGNL & SUGCON
- ☐ Married & 3 kids
- ☐ Hobbies: Movies, Cycling, Soccer
- ☐ Interests: DXP, Blockchain, Al
- ☐ Blog: <a href="https://www.kayee.nl/blog">https://www.kayee.nl/blog</a>

## Agenda

- ☐ Ways of component development with XM Cloud
- ☐ Prerequisites BYOC
- ☐ Features BYOC
- ☐ BYOC Rendering modes
- ☐ How to build
- ☐ JSON Schema Form explained
- ☐ How to use BYOC
- ☐ See it in action (simple & advanced scenario)
- Documentation

## ## CAYEE bment

## 3 Ways of Component Development

- □ Next.js/JSS
- ☐ Components Builder
- ☐ BYOC

Documentation can be found at:

https://doc.sitecore.com/xmc/en/developers/jss/216/jss-xmc/introducing-sitecore-

<u>javascript-rendering-sdk.html</u>

https://doc.sitecore.com/xmc/en/users/xm-cloud/build-components.html

https://doc.sitecore.com/xmc/en/developers/xm-cloud/bring-your-own-

components.html

## Prerequisites BYOC

- ☐ Only available in XM Cloud
- □ JSS 21.6

#### Features BYOC

- ☐ Display like Native Components
- ☐ Hot Reloading
- ☐ Use your own tools
- ☐ Re-usage across sites
- ☐ UI is generated by configuration
- ☐ Configuration data & external data
- ☐ No inline field editing

#### BYOC Rendering Modes

- ☐ Hybrid Rendering
- Client-side rendering

Recommended: Hybrid Rendering

#### How to build?

- ☐ Option 1 External code base (React components hosted externally
- ☐ Option 2 JSS scaffold & auto-register

#### Documentation can be found at:

https://doc.sitecore.com/xmc/en/developers/xm-cloud/walkthrough--registering-an-external-react-component.html

https://doc.sitecore.com/xmc/en/developers/jss/216/jss-xmc/scaffold-and-auto-register-your-own-components-in-a-next-js-app.html

#### JSON Schema Form

JSON Schema Form is basically a React component that

is capable of using JSON Schema to declaratively build

and customize web forms

#### JSON Schema Form

- ☐ JSON Schema standard
- ☐ Structure & Validation configuration upon JSON Schema.
- ☐ Sitecore also uses 'uiSchema' for UI

#### Schema's can be found at:

https://rjsf-team.github.io/react-jsonschema-form/docs/json-schema/

https://rjsf-team.github.io/react-jsonschema-form/docs/api-reference/uiSchema/

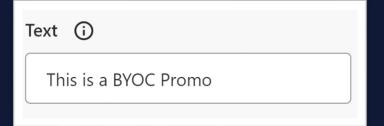

### ‡ KAYEE

#### JSON Schema Form Field Types

- □ Playground <a href="https://rjsf-team.github.io/react-jsonschema-form/">https://rjsf-team.github.io/react-jsonschema-form/</a>
- □ Types: "string" | "number" | "boolean" | "object" | "integer" | "array" |

"null"

☐ String:

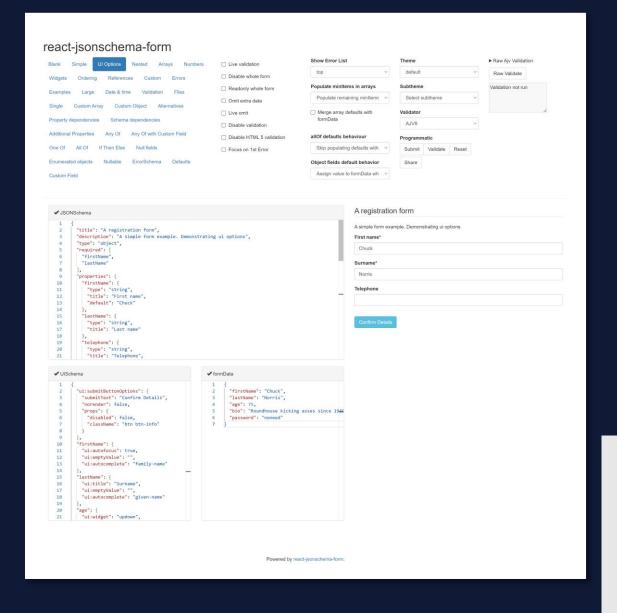

☐ Array (One option)

☐ Array (multiple options)

#### How to use BYOC?

- ☐ FEAAS.External.registerComponent & Import
- ☐ Drag & Drop in Pages
- **□** Configuration
- **□ Update**

#### **BYOC** in Action

**56** 

#### It's demo time!

#### BYOC documentation

#### Sitecore:
